## Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

### NAMES AND LABELS

#### ▲ Links do not have a discernible name

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

### AUDIO AND VIDEO

#### ○ <video> elements contain a <track> element with [kind="captions"]

These are opportunities to provide alternative content for audio and video. This may improve the experience for users with hearing or vision impairments.
